## New and exclusive to Lindee Lu! Synthetic wood Cat houses

A product that looks exactly like any type of wood but is made totally of recycled material. One that requires no painting or priming and is completely maintenance free – throughout its 50+ year life!

We are reducing the depletion of the world's precious hardwood and softwood forests quite simply because our new product can be made to look like any natural timber product but is stronger, more consistent and lasts longer.

Our synthetic wood is waterproof and UV stable to the strictest standards. It is lighter than the lightest of softwoods but stronger than any of the South American hardwoods.

We have found that our customers prefer the look of wood in their gardens as UPVC housing often looks ugly and unwelcoming. We have managed to find the perfect solution with our synthetic wood bringing you the soft, elegant look of wood combined with the rot and maintenance free bonus of UPVC.

Made to exactly the same specification as our wooden houses, the synthetic wood house maintains the well loved and respected quality of Lindee Lu pens. They can be manufactured to any size or design from our brochure so call now for a quotation.
